PROFILE

Computer Science student and Python developer building offline computer-vision tools, desktop AI assistants, and backend systems. In my time as an IT Intern at OES Energy Services, I built an internal document-extraction tool used in the company's ID-card production workflow. Working through a self-directed 50-project roadmap to sharpen skills across APIs, databases, computer vision, and automation. Focused on writing clean, dependable software that holds up outside of a tutorial.

EXPERIENCE

IT Intern — OES Energy Services Limited, Nigeria

Present

- Designed and built the OES ID Extractor, a fully offline computer-vision tool now used internally to pull photos and signatures from ID documents for card production.
- Worked within corporate data-privacy constraints, keeping the entire pipeline offline with zero external API calls to protect sensitive data.
- Partnered directly with non-technical stakeholders to turn a manual, repetitive task into a batch-processed, one-click tool.
- Actively learning on the job, working alongside the team's real workflows rather than simulated ones.

PROJECTS

The Local Tutor — Python, PySide6, Ollama

- Offline desktop app that generates study notes and practice questions from educational documents using a locally run LLM (Ollama), with no cloud dependency.

OES ID Extractor — Python, Computer Vision, Background Removal, PyInstaller

- Offline desktop app that detects and crops personnel photos and signatures from uploaded PDFs/images, removes backgrounds, sharpens output, and exports clean files named per person, with zero cloud dependency.

Ned the Nerd — Python, PyQt6, Speech Recognition, OpenAI API, SQLite

- Modular desktop AI assistant with speech-to-text input, conversational memory, and a plugin-ready architecture for desktop automation; built on PyQt6 with an OpenAI-backed conversational core.

Panaview — Python, PostgreSQL, Tkinter, pycpg2

- Full-stack movie reservation and booking system with separate user and admin dashboards; supports live seat availability, itemized receipts, and automatic cleanup of shows when a title is removed.

SKILLS

Languages: Python, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries: PyQt6, PySide6, Tkinter, Flask, OpenCV, YOLO, SpeechRecognition

Databases: PostgreSQL, SQLite, pycpg2

Tools & Platforms: Git, GitHub, VS Code, PyInstaller

Core Skills: Python Development, Automation, Data Processing, Computer Vision, REST APIs, API Integration, Document Processing, Web Automation, Debugging & Testing, Desktop Application Development

EDUCATION
